

SageGlass®

SMART GLASS BETTER HEALTHCARE OUTCOMES

The use of SageGlass helps create a smart, connected and wellness-focused healthcare environment.

Improve thermal comfort by eliminating 91% of solar heat gain

Reduce energy loads up to 20% and peak energy up to 26%

Attract the Best Providers and Retain Talent

Create a smart, connected and adaptable healthcare facility

BRINGING NATURAL LIGHT FOR PATIENTS & STAFF

SageGlass installed in Hospitals and Medical Office Buildings delivers a healing experience and wellness environment thanks to its optimized daylighting properties and thermal comfort performance. Independent studies in Healthcare buildings have demonstrated numerous positive outcomes associated with ample natural light.

TECH INNOVATION

Smart glass changes the way people experience buildings. Windows with conventional glass needs blinds or curtains to provide relief from glare and heat, but in doing so also block access to daylight and views. SageGlass is an intelligent, adaptive technology that provides people all the benefits of natural light and views without any trade-offs. In addition, facility managers have more control of their facility than ever before.

CLEAR WHEN YOU WANT IT, DARK WHEN YOU NEED IT

SageGlass tints automatically in response to the weather. Exterior sensors along with intelligent, predictive algorithms dictate the tinting of the glass to ensure occupants stay comfortable year round without the need for blinds or shades.

Patients have control too. Giving patients back some control can alleviate stress, which is conducive to better health outcomes. While SageGlass is automated, it also provides manual control, whether through a wall-mounted touchpad, a Mobile App, a Building Management System or all of the above.

HEALTHCARE FACILITIES THAT HAVE SELECTED SAGEGLASS INCLUDE:

- McFarland Clinic (USA)
- Meeker Memorial Hospital (USA)
- Choctaw Nation Medical Center
- Fairview Ambulatory Entrance (USA)
- Mercy Orthopedic Hospital (USA)
