

PRODUCT FAQ: SAGEGLASS HARMONY®

Q: What is Harmony?

A: SageGlass Harmony is the newest addition to the SageGlass product line and represents the latest innovation in dynamic glazing. Harmony features an elegant visual experience with a continuum of tint levels going from clear to tinted, vertically along the glass. This continuum can dynamically change from top to bottom or bottom to top, depending on what is needed for heat and glare management.

Q: Where will Harmony be available?

A: Harmony is available wherever other SageGlass products are sold. Contact your SageGlass representative for country-specific queries.

Q: When will Harmony be available for orders?

A: Harmony is available for specification and order today. Contact your local SageGlass representative to specify it on your project.

Q: How can I see what Harmony looks like?

A: Visit sageglass.com/harmony to see images of SageGlass Harmony. Your local SageGlass representative can also provide images. To find your local rep, please visit sageglass.com/contact.

Q: Will Harmony come in all the shapes, sizes, and configurations of standard SageGlass?

A: Harmony is only available as a rectangle, though all IGU configurations compatible with SageGlass can be implemented for Harmony. The gradient tinting of Harmony is optimized for a maximum width of 72" and a minimum height of 48".

Q: Are there specific glazing applications that are suggested for Harmony?

A: Harmony will work best in framing applications with one, two, or potentially three stacked windows like ribbon windows, or punched openings. Harmony is not recommended for skylights.

Q: In addition to "Harmony" gradient tint states, does SageGlass Harmony also have the four tint levels available in standard SageGlass?

A: Yes, in addition to the Harmony tint states, the standard four uniform tint states (Clear, Light, Mid, Dark) are also be available with Harmony.

Q: Does Harmony have different warranty conditions?

A: Harmony has the same warranty conditions as other SageGlass products.

Q: Does Harmony have different requirements for installation, either of glass, controls, or both?

A: Harmony must be used in conjunction with the SageGlass Symphony® control system and is not compatible with previously installed SageGlass glass or controls.

Q: I have SageGlass installed at my building. Can I convert it to Harmony?

A: No, neither SageGlass nor SageGlass LightZone can be upgraded to Harmony without re-glazing the windows.

Q: How does the reliability of Harmony compare to other SageGlass products, or other static glazing products?

A: Harmony adheres to the same high standards of product reliability and durability as the entire SageGlass product line. SageGlass has been tested across a range of harsh conditions, outperforming requirements in durability testing by independent third-party organizations like the U.S. Department of Energy.

Q: Is Harmony capable of controlling glare like other SageGlass products?

A: Like other SageGlass products, Harmony is effective for glare control. Harmony can precisely block glare while allowing daylight in a seamless, natural manner. In the Harmony tint state, the glass presents itself with a tint continuum from 1% to 60% VLT. In addition, Harmony is capable of the standard, full tint state, with 1% VLT uniformly present over the entire pane.

Q: Does Harmony share the energy saving characteristics of typical SageGlass offerings?

A: Harmony can deliver very low g/SHGC values in the manner other SageGlass offerings can. If maximum energy savings are desired, the entire pane can tint to 1% or 6% VLT. If you desire a balanced approach, controlling for energy efficiency, daylight, and glare, this can be accomplished using the Harmony tint states.
